Canary Challenge

Dianna Hoover <dhoover@canarylabs.com> Thu, Mar 5, 2026 at 4:51 PM
To: Jeremy Chernin <jeremychernin@gmail.com>

We want to evaluate your software programming skillsets.

Purpose of This Evaluation:

We want to see how you think, organize code, and explain your choices — not just working code. For a position as an entry-level developer, we value clarity, simplicity, and clean habits over complexity. You'll pick 1 of the 4 challenges below, complete it in under 6 hours, and present it live (30–45 min). If it's taken more than 6 hours, you're probably doing too much.

You can use any popular language (Python, JavaScript, Java, C#, etc.) — your choice! These are just examples.

Choose one of the four challenges on the attached document.

How We'll Evaluate (Simple & Clear)

What We Check	Why It Matters
Clean project layout (folders, files, classes)	Easy to follow
Simple, working code	No overkill
Good names & minimal comments	Shows clear thinking
Handles basic errors (invalid input, full lot, etc.)	Real-world ready
You can explain your design & decisions	Most important
Easy to run on any machine	We'll run it live

Submission (Due: Wednesday, December 3, at 9:00 AM EST)

1. Create or use a GitHub repo (public or private) and share
2. Include:
    - README.md with:
        - Language used
        - Step-by-step how to run
        - Your design choices & why
        - How you'd extend it (e.g., VIP spots, monthly pass)
3. Reply to this email with:
    - GitHub link
    - Which challenge you picked
    - Language used

We'll clone and run your project live during the interview.

Pick the one that excites you most.

This is about your approach, not perfection.

If you have any questions, please feel free to contact me.

Regards,

Dianna Hoover
